...pages on the Microsoft Web site. The pages contain information about the new Outlook Security **Update**, designed to make it more difficult for computer viruses to hitch a ride on e-mail messages. Once this **update** has been installed, users of Microsoft's Outlook e-mail programs cannot receive certain "unsafe..."

...of files attached to e-mail messages. Thanks to Jon, here are the corrected links:**http**  
://officeupdate.microsoft.com/2000/downloaddetails/Out2ksec.htm**http://officeupdate.microsoft.com/downloadDetails/Out98sec.htm**The top link describes the changes to Microsoft Outlook 2000, and allows you to download its Security **Update**. The bottom link provides the same information, but applies to Microsoft Outlook 98.Reader Kevin...

...I just wanted to let you know that I was able to uninstall the security **update** from Microsoft without any problems. I have Windows 2000 and Outlook 2000. I installed it....

...not everyone may be as lucky as Kevin. Microsoft still maintains that their Outlook Security **Update** should not be simply removed. To properly disable the **update** they recommend uninstalling all Microsoft Office components (Word, Excel, Outlook, etc.), then reinstalling those components from their original CDs. Just one more reason to avoid this **update**, in my opinion. File TypesAnother reader, John Shaw, offered a good suggestion. He noted that...

...unsafe." These are the types of files Outlook refuses to deliver once the new Security **Update** has been installed. These files, plus more than two dozen types Microsoft overlooked, are now...

...extensions with bits of code that you know of? I have been using these to **update** my virus scanner, since it only came with about 16 extensions in its default mode...

...their list of potentially unsafe files. You can see it on their Web site at **http://support.microsoft.com/support/kb/articles/Q262/6/31.ASP**, or checkout the list below...
